-i- FUNCTION: COLLAGEN TYPE IX IS A MINOR CARTILAGE NONFIBRILLAR
COLLAGEN. IT IS ASSOCIATED WITH TYPE II COLLAGEN FIBRILS.
-i- SUBUNIT: TRIMERS COMPOSED OF THREE DIFFERENT CHAINS: ALPHA 1(
ALPHA 2(IX), AND ALPHA 3(IX).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CONFLICT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ALTERNATIVE SPLICING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PTM: Covalently linked to the telopeptides of type II collagen by lysine-derived cross-links.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

SIMILARITY: BELONGS TO THE FIBRIL-ASSOCIATED COLLAGENS WITH INTERRUPTED HELICES (FACIT) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING. DOMAIN: EACH SUBUNIT IS COMPOSED OF THREE TRIPLE-HELICAL DOMAINS INTERSPERSED WITH NONCOLLAGENOUS DOMAINS. THE GLOBULAR DOMAIN AT THE N-TERMINUS OF TYPE IX COLLAGEN WOLECULES REPRESENTS THE NC4 DOMAIN WOLECULES REPRESENTS THE NC4 DOMAIN WHICH MAY PARTICIPATE IN ELECTROSTATIC INTERACTIONS WITH DOMAIN WHICH MAY PARTICIPATE IN ELECTROSTATIC INTERACTIONS WITH POLYAMIONIC GLYCOSAMINOGLYCANS IN CARTILAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: Structural component of hyaline cartilage and vitreous of the eye subunit: Heterotrimer of a alpha 1(\mathrm{IX}), a alpha 2(\mathrm{IX}) and a alpha 2(\mathrm{IX}) and a alpha 2(\mathrm{IX}) and 2(\mathrm{IX}) and 2(\mathrm{IX}) and 2(\mathrm{IX}) and 2(\mathrm{IX}) and 2(\mathrm{IX}) and 2(\mathrm{IX})
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    X54413 CAA38277.1;

PTM: PROLINES ANT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

DISEASE: Defects in COL5A2 are a cause of Ehlers-Danlos syndrome gravis or type I (EDS-I), and Ehlers-Danlos syndrome mitis or type II (EDS-II). Ehlers-Danlos syndrome is a genetically and phenotypically heterogeneous connective-tissue disorder characterized by loose-jointedness and fragile, velvety, stretchable, bruisable skin that heals with peculiar 'cigarette-paper' scars. EDS-I and EDS-II are autosomal dominant traits.
